

(a) Localization Failure

Question : What is the main abnormality shown in this spine X-ray?

Reference : **Reduced vertebral body height** is visible in the involved spinal segment, with a shortened vertebral body contour that supports the interpretation of **vertebral collapse**.

Prediction: <VIS> **Bony spur-like projections** are visible. <KNO> The observed spur-like morphology is consistent with osteophytic change and supports interpretation as osteophytes. <CON> **Osteophytes**

(b) Sequence Grounding Error

Question : What is the main abnormality in the localized brain region?

Reference : A **brain tumor region** with **enhancing and necrotic/non-enhancing core components** is visible on **T1ce MRI**, supporting the diagnosis of **brain tumor**.

Prediction: <VIS> A **brain tumor region** is visible in the brain. <KNO> On **FLAIR MRI**, the brain tumor region shows **high signal intensity**, which is **characteristic of its tumor nature**. <CON> **Brain tumor**.

(c) Laterality Error

Question: Where is the brain tumor located?

Reference : The tumor is localized to the **lower left cerebral region**, with the source annotation indicating a **left-sided brain lesion**. The corresponding final answer is **Lower Left Lobe**.

Prediction: <VIS> A **brain tumor region** with a peritumoral edema component is visible. <KNO> On FLAIR MRI, the **peritumoral edema component** helps delineate the edema-related portion of overall tumor extent. <CON> The brain tumor is located in the **right parietal lobe**.

(d) Visual Characterization Error

Question: Is the heart wider than more than half the width of the thorax?

Reference: The cardiac silhouette occupies clearly **less than half** of the internal thoracic width, arguing **against cardiac enlargement** by this criterion.

Prediction: <VIS> The cardiac silhouette **appears enlarged**, indicating that the heart's width **exceeds half the width of the thorax**. <KNO> The heart's width exceeding half the thoracic width is the imaging basis for a **cardiomegaly** interpretation. <CON> **Yes**.
